EDUCATION

Indiana University, Luddy School of Informatics, Computing, and Engineering, Bloomington, IN May 2026

- *B.S. in Data Science* | Minor: Computer Science | 3.7/4.0 GPA
- *Honors*: Dean's List for the Luddy School, Dean's Scholarship, Luddy Dean's Academic Merit Scholarship
- *Certification*: AWS Cloud Practitioner
- *Relevant Coursework*: Data Analysis & Mining, Database Concepts, Data Modeling & Inference

TECHNICAL SKILLS

- *Languages*: Python, SQL, R
- *BI & Reporting*: Power BI, Tableau, Excel
- *Cloud & Tooling*: Claude/Claude Code, GitHub, AWS, Azure Logic Apps, Terraform, GitHub Actions

WORK EXPERIENCE

Data Analyst, Indiana University Office of School Partnerships, Bloomington, IN June 2024 - Present

- Built and deployed two geospatial web applications via GitHub Actions, tracking 1,370 partnerships across 268 school districts and 98% of Indiana counties with scheduled API refresh.
- Cut a third of manual effort per data ingestion cycle by automating discovery, classification, and research of university engagement activities from news sources with a Python agentic pipeline.
- Analyzed enrollment and pre/post survey data from ~500 students across 6 campuses in Excel, delivering program outcome reports to program directors and university leadership.

Enterprise Architecture Intern, Tenneco, Northville, MI June 2025 - August 2025

- Cut SAP audit report generation by 98% (40 hrs. to 30 min) by automating data extraction and validation workflows.
- Automated contract data synchronization across systems using Azure Logic Apps, transferring several hundred records from the system of record to downstream repositories.
- Prototyped a text-to-SQL interface over Redshift using an LLM API, self-provisioning the AWS environment (EC2, RDS) with Terraform and building Power BI dashboards from the output.

PROJECT EXPERIENCE

Data Science Capstone, Clinical EHR Data Quality Assessment August 2025 - May 2026

- Built a peer-relative data quality framework with Python, SQL, and R, matching 30,000 patients on comorbidity index and engineered health-site utilization rates to measure completeness of records.
- Uncovered racial gaps in diabetes-related testing unexplained by clinical complexity, holding demographics out of the kNN feature space so gaps reflected residual variation.
- Validated results through permutation testing and sensitivity analysis across 12 model configurations, finding consistent data quality gaps across approaches.

Referee Schedule Builder, Scheduling Optimization Tool May 2024 – July 2024

- Built a scheduling optimization tool aggregating game data from multiple assignor APIs, modeling time, travel distance, and transition feasibility to rank viable assignment sequences.
- Increased assignment earnings 20% by using tool recommendation to build efficient schedules with minimal travel and gaps between games.
