EDUCATION

Indiana University, Luddy School of Informatics, Computing, and Engineering, Bloomington, IN May 2026

- *B.S. in Data Science* | Minor: Computer Science | 3.7/4.0 GPA
- *Honors*: Dean's List for the Luddy School, Dean's Scholarship, Luddy Dean's Academic Merit Scholarship
- *Certification*: AWS Cloud Practitioner
- *Relevant Coursework*: Data Analysis & Mining, Database Concepts, Data Modeling & Inference

TECHNICAL SKILLS

- *Languages*: Python, SQL, R
- *BI & Reporting*: Power BI, Tableau, Excel
- *Cloud & Tooling*: AWS, Azure Logic Apps, Terraform, GitHub Actions, Git/GitHub

WORK EXPERIENCE

Data Analyst, Indiana University Office of School Partnerships, Bloomington, IN June 2024 - Present

- Built and deployed two geospatial web applications via GitHub Actions, tracking 1,370 partnerships across 268 school districts and 98% of Indiana counties with scheduled API refresh.
- Automated discovery, classification, and research of university engagement activities from news sources by building a Python agentic pipeline, cutting a third of manual effort per ingestion cycle.
- Analyzed enrollment and pre/post survey data from ~500 students across 6 campuses in Excel, delivering annual program outcome reports to directors and university leadership.

Enterprise Architecture Intern, Tenneco, Northville, MI June 2025 - August 2025

- Analyzed SAP audit reporting workflows and automated data extraction and validation, cutting report generation by 98%, from 40 hours to 30 minutes.
- Built and deployed an Azure Logic Apps integration syncing contract data from the system of record to downstream repositories, eliminating manual re-entry of several hundred records.
- Prototyped a text-to-SQL interface over Redshift using an LLM API, self-provisioning the AWS environment (EC2, RDS) with Terraform and building Power BI dashboards from the output.

PROJECT EXPERIENCE

Statswatch, Overwatch 2 Gameplay Analytics Platform May 2026 - Present

- Engineered a computer-vision system to extract objective data from gameplay video via template matching, OCR, and color-based analysis, capturing telemetry the game API does not expose.
- Designed the analytics dashboard and UX around team-fight segmentation, letting players surface recurring performance patterns across fights and objectives rather than isolated match stats.

Data Science Capstone, Clinical EHR Data Quality & Reliability Assessment August 2025 - May 2026

- Developed a peer-relative data quality framework in SQL, R, and Python to assess EHR documentation completeness across a 30,000-patient sample from a 152,000-patient OMOP registry.
- Excluded demographics from the KNN feature space to isolate residual disparity, uncovering racial gaps in diabetes-related testing unexplained by clinical complexity.
- Stress-tested the result with permutation testing and sensitivity analysis across 12 model configurations, confirming gaps aligned with established clinical testing standards.
