Data Analyst

Data Analysis | Data Visualization | Data Engineering | AI Workflows & Automation | Stakeholder Reporting

Data Analyst with experience transforming complex datasets into actionable insights through statistical analysis, data visualization, and automation, including AI-powered agentic workflows for data extraction, classification, and reporting. Proven ability to build data pipelines, improve data quality, and deliver insights to technical and non-technical stakeholders. Skilled in SQL, Python, BI tools, and cloud-based data systems, with experience spanning higher education, enterprise, and healthcare analytics.

Core Competencies:

Data Analysis & Statistical Modeling • Predictive Modeling • Machine Learning • Data Visualization & Business Intelligence • Data Pipelines & ETL Development • Database Design & Data Modeling • Data Quality & Data Cleaning • Process Automation • Agentic Workflow Development • API Integration • Cloud-Based Data Solutions • Stakeholder Communication & Reporting • Problem Solving

Technical Proficiencies:

Python • SQL • R • Java • Swift • Power BI • Tableau • AWS (EC2, RDS Redshift, etc.) • Azure Logic Apps • Terraform • Git • GitHub

Education & Certifications

Indiana University | Luddy School of Informatics, Computing, and Engineering | Bloomington, IN **May 2026**
B.S. Degree, Data Science | Minor: Computer Science **3.7/4.0 GPA**
Honors: Dean's List for the Luddy School, Dean's Scholarship, Luddy Dean's Academic Merit Scholarship
Certificates: AWS Cloud Practitioner
Relevant Coursework: Statistics, Data Analysis & Mining, Database Concepts

Relevant Work Experience

Data Analyst | Indiana University Office of School Partnerships, Bloomington, IN **June 2024-Present**
• Designed and deployed a multi-agent workflow that automates discovery, classification, and ingestion of university engagement activities from news sources, including monitoring mechanisms that detect and resolve scraping failures to improve pipeline reliability.
• Developed and deployed two interactive geospatial maps to visualize university engagement activities and track IU 2030 strategic goals, improving program visibility, supporting stakeholder reporting, and encouraging partner participation in data-sharing initiatives.
• Designed data schemas and ingestion pipelines integrating IDOE datasets, standardizing school and district records with state education identifiers and established data governance standards for consistent reporting.

Enterprise Architecture Internship | Tenneco, Northville, MI **June 2025 – August 2025**
• Analyzed SAP audit reporting workflows and automated data extraction and validation, reducing reporting time by 98% (1 week → 30 minutes) and eliminating more than 40 hours of manual effort required for each generated report.
• Improved data accessibility by designing a GenAI-powered knowledge base that enabled plain-English queries, allowing nontechnical teams to retrieve, interpret, and use structured business data independently without requiring SQL expertise.
• Integrated enterprise systems with Azure Logic Apps to improve contract visibility and reduce manual reconciliation.
• Provisioned AWS (EC2, RDS, Redshift) with Terraform and built Power BI dashboards for stakeholder insights.

Relevant Project Experience

Data Science Capstone | Clinical EHR Data Quality Analysis & Reliability Assessment, Bloomington, IN **August 2025-Present**
• Developed a peer-relative data quality framework using SQL and Python to assess EHR documentation completeness across a statewide OMOP clinical registry, establishing structured metrics for cross-patient and cohort-level comparison.
• Built data pipelines and applied KNN-based benchmarking to identify documentation gaps and prioritize review cohorts, uncovering racial disparities in completeness after controlling for patient complexity that were not captured through descriptive analysis.

Predictive Analysis Project | NHL Game Outcome Analysis, Bloomington, IN **November 2025- December 2025**
• Built a predictive modeling pipeline for NHL game outcomes using Python, engineering time-aware features and comparing KNN and Random Forest models to evaluate predictive performance, producing insights on model tradeoffs and forecasting behavior.

Decision Analysis Project | Referee Schedule Builder, Naperville, IL **June 2024- July 2024**
• Developed a decision-support scheduling tool that optimized referee game selection using availability, schedule constraints, and travel distance, aggregating multi-source API data and applying a constraint-based algorithm to reduce scheduling time by 2 hours per week and increase earnings by 20%.
